DETAILED ACTION

Claims 1-25 are pending in the instant application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 9-12, 15-18 and 21-23 and 25, drawn to nucleic acid and vector selected from SEQ ID NOs: 42-164 and a transgenic seed and plant, classified in class 536, subclass 23.1; class 435, subclass 320.1; and class 435, subclass 419.
- II. Claims 5-8, 13-14, 19 and 20 drawn to nucleic acid and vector selected from SEQ ID NOs: 42-164 and further comprising SEQ ID NO:5 and a transgenic seed and plant, classified in class 536, subclass 23.1; class 435, subclass 320.1; and class 435, subclass 419.

The inventions are distinct, each from the other for the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because they are drawn to different products and methods. Group I is drawn to a transformation vector, the transformed plant cells and the transgenic plant comprising nucleic acids selected from SEQ ID NOs:42-164. The method of Group II further comprises SEQ ID NO:5. As evidenced by the fact that the method of Group II requires an additional sequence, the invention is unique from that of Group I because the sequence of SEQ ID NO:5 is

Art Unit: 1636

a unique chemical entity with unique characteristics requiring a different field of search for Group II than the method of Group I.

This application contains claims that are directed to patentably distinct nucleotide and amino acid sequences. The claims of the instant application recite SEQ ID NOs:42-164. The nucleotide sequences and amino acid sequences of the instant claims are subject to a restriction requirement. Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Applicant's claimed sequences comprise open reading frames. Absent evidence to the contrary, each such nucleotide sequence or amino acid sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq. Accordingly, in most cases, only one (1) independent and distinct sequence will be examined in a single application without restriction.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and because the inventions have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1636

application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
